One Solution • One Workflow • One Provider

Designed by Fairfax Software, *Quick Branch Capture* is a multipurpose solution that allows users to scan and balance batches remotely and transfer check images and data to a centralized location for electronic deposit. The application can capture MICR, detect duplicate checks, perform batch balancing, and enable a teller to resolve errors. *Quick Branch Capture* is designed to support both Branch Capture and Remote Deposit Capture (RDC) applications. *Quick Branch Capture* works alongside an operator to create balanced batches that may be submitted to a customized *Quick Modules* workflow.

With *Quick Branch Capture*, you can scan checks at remote locations and then add them to a centralized workflow for an easy stream of highly organized information directly to a consolidated Microsoft SQL Database. The data can be seamlessly posted to the corresponding Check21 software if that corresponds with your particular software solution. The *Quick Reports* module gives you a detailed breakdown of the batch: batch number, batch totals, and information about each check in the batch including routing number, account number, check number, and check amount.

About Fairfax Software:

Fairfax Software, headquartered in Tampa, Florida, was founded in 1994 to provide high-quality products and integration services to the payment, document, fax, and form processing industries. Since its inception, Fairfax Software has remained focused on its primary niche area of expertise. *Quick* Modules stands as the system of choice for numerous Fortune 500 companies and government agencies. *Quick* Modules systems successfully process billions of transactions with data captured from documents, checks, electronic files, fax messages, and remittances.
